Streamer Buddy System

Update and upcoming features · 6 November 2026

- **The streamer's OBS dock got calmer and quicker to use:** no pop-out windows, one message area that takes turns, and one-tap answers (♥ ✓ ×).
- **Mods can see what the streamer sees** (Streamer View) and **nudge** a question instead of it escalating by itself.
- **Coming next:** a warning for when it really matters, and a glow that rests instead of staying on.

Live now shipped today

For the streamer (OBS chat dock)

- **Message area.** The place to look, just under the bar, a little larger than everything else and glowing softly in the colour of what it shows. With more than one message it takes turns every 6 seconds; it holds still while her mouse is over it or she's typing a reply. Something new jumps straight in. "See all" opens the full list.
- **One-tap answers:** ♥ ✓ ×, heart on the left, on any question, or a typed reply.
- **No pop-out windows.** The full list, Connections, chat and stats open just under the bar with a Close button.
- **Pictures show who's in chat.** A ring for how recently each mod chatted (green within 5 minutes, then orange, yellow and white), just the picture lit up when they're quiet, and gray once they've left.
- **Settings gear:** sound on or off, volume, reminder beeps, edge glow, the quick-questions row, custom or Twitch chat, chat text size, and whether to share Streamer View.
- **Calmer sound and glow.** One clear beep when something arrives; one softer beep per nudge. A thin, faint edge instead of a thick flashing one.
- **Starts with the right person.** Sending starts with the last person she talked to, never a group.

For mods (Chrome side panel)

- **Streamer View.** The top of the panel shows what the streamer's dock shows right now: its glow colour, everything waiting for her, unseen answers, and notes in her bar. It follows the channel you're watching.
- **Nudge instead of a timer.** Every question arrives green. If it isn't answered, the person who asked taps Nudge: orange, then yellow, then white (up to three, 15 seconds apart).
- **Simpler Ask box.** One typing bar, with Ask, Quick info or !vanish picked at its left. It starts with the streamer you're watching.
- **Status menu.** Online, Idle or Offline, picked from a small menu.

Behind the scenes

- **Two-machine simulator** for testing on one computer: a mod's panel and the streamer's dock side by side as pretend users, a fake chat with made-up chatters in their own colours, and buttons for asking, nudging, warning, and mods joining, chatting and leaving.
- Updates reach an open OBS dock by themselves within about a minute.

Coming next built and tested, not live yet

Warning mode

When it really can't wait: while Nudge is waiting (or after the third nudge), tapping it six times quickly sends a **warning**. It turns **red** on the streamer's screen with a louder double beep, even if she's turned reminder beeps off. At most one every 30 seconds per question, so it can't be spammed.

A glow that rests

The glow no longer stays on. It shows for about 2 seconds, fades down to 2%, and only comes back if the question is still unanswered: after 15 seconds, then every 10 seconds, resting at 5% in between. The words stay fully readable the whole time.

Moment	Colour	Sound
Question arrives	Green	One clear beep
1st nudge	Orange	One soft beep
2nd nudge	Yellow	One soft beep
3rd nudge	White	One soft beep
Warning (six quick taps)	Red	Louder double beep

After that ideas to decide on

- **Live test with a real streamer**, she in OBS and a mod in Chrome, to check the timing and sounds on a real stream.
- **Who sees Streamer View.** Today every mutual connection sees everything waiting for her, including other people's questions. It could be limited to her Mods tag.
- **The streamer's quick-questions row** ("Clip that!"). It can be hidden in Settings; it could be removed like the mod's.
- **Twitch Space extension update** so the side panel follows the channel you're watching for everyone (it's ready; it needs publishing).

What it looks like

From the test simulator. The first six are the streamer's OBS dock; the seventh is the mod's side panel at the same moment as the warning.
