STREAMER BUDDY SYSTEM · UPDATE · 6 NOVEMBER 2026

Mods look out for the streamer. The streamer stays on stream.

A calmer OBS dock for the streamer, and a side panel that lets mods see what the streamer sees, nudge, and warn when something can't wait.

Mods: Twitch Space 2.5.0
github.com/handsome-tom/MytwitchTom-Tester/releases/latest

Streamer: the OBS dock
No extension needed; two-minute setup

HIGHLIGHTS

What changed today

A message area, not pop-ups

Everything waiting shows in one calm spot under the streamer's bar, taking turns. No pop-out windows.

One-tap answers

♥ ✓ × right in the bar, on any question, or a quick typed reply.

Nudge, don't nag

Questions arrive green and only move up when the mod who asked taps Nudge.

A warning when it matters

Six quick taps sends the streamer a red heads-up: trouble in chat, a safety issue.

Streamer View

Mods see exactly what's on the streamer's dock before adding anything more.

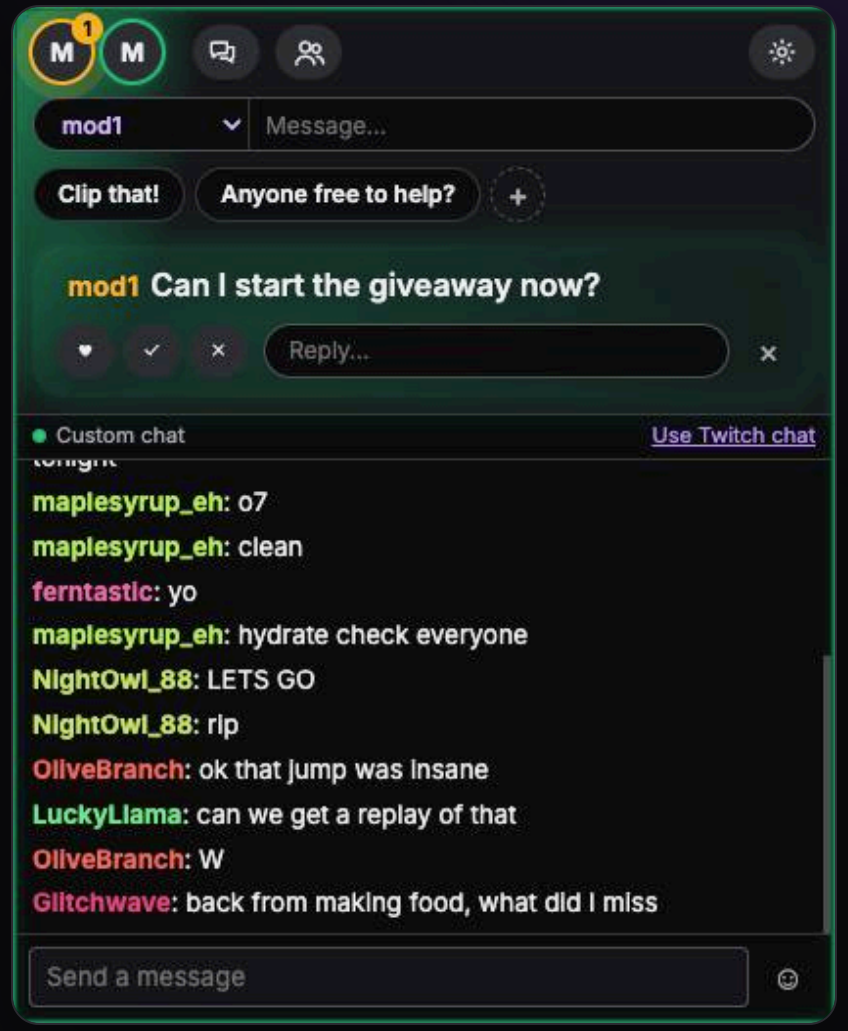

Cleaner everywhere

Slim lists for mods, full-size notes for the streamer, and chat bookmarks.

FOR THE STREAMER · OBS DOCK

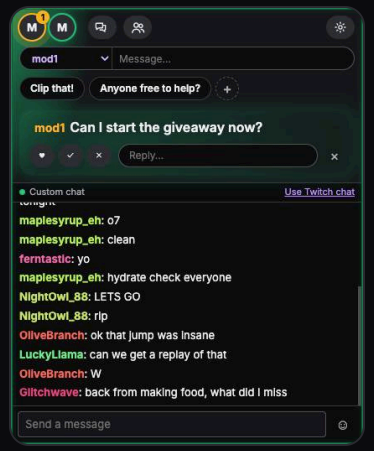

One place to look

- **The message area** sits just under the bar, a little larger than everything else, in a soft glow.
- **One tap to answer:** ♥ ✓ × (heart on the left), or type a reply.
- **Several waiting?** They take turns every 6 seconds, holding still while the mouse is over them or a reply is being typed.
- **"2 of 5 ▾"** drops down a short list of everything waiting; pick one to show it.
- **No pop-out windows.** Anything bigger opens just under the bar, with a Close button.

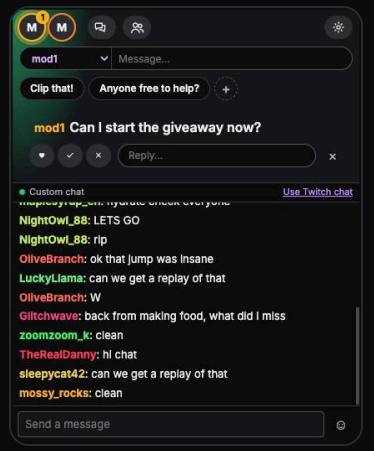

FOR THE STREAMER · THE GLOW

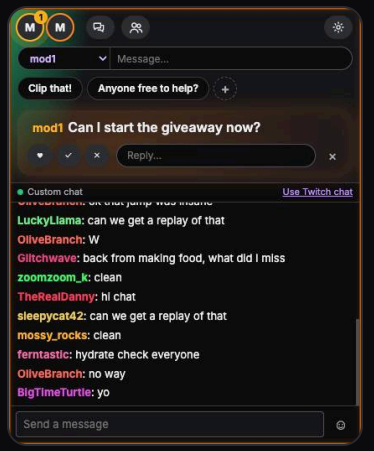

A glow that reminds, without badgering

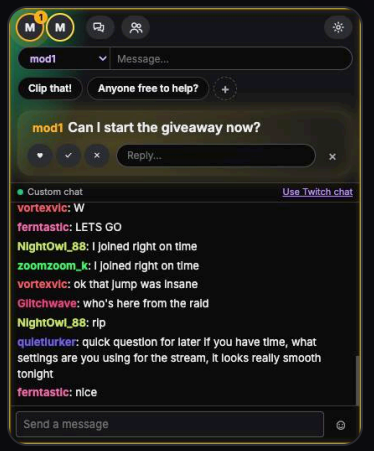

Arrives
Green, one clear beep

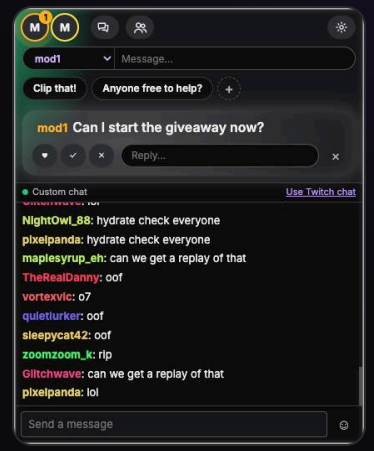

Rests
Fades to 2%; back after 15 s, then every 10 s

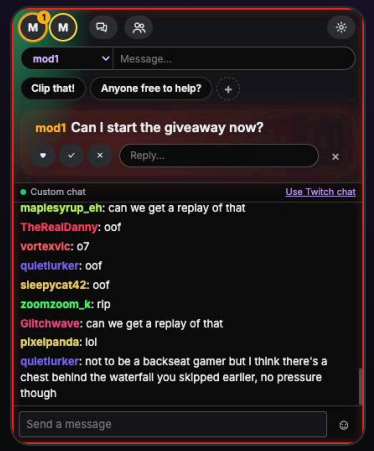

1st nudge
Orange, one soft beep

2nd nudge
Yellow

3rd nudge
White, as far as nudges go

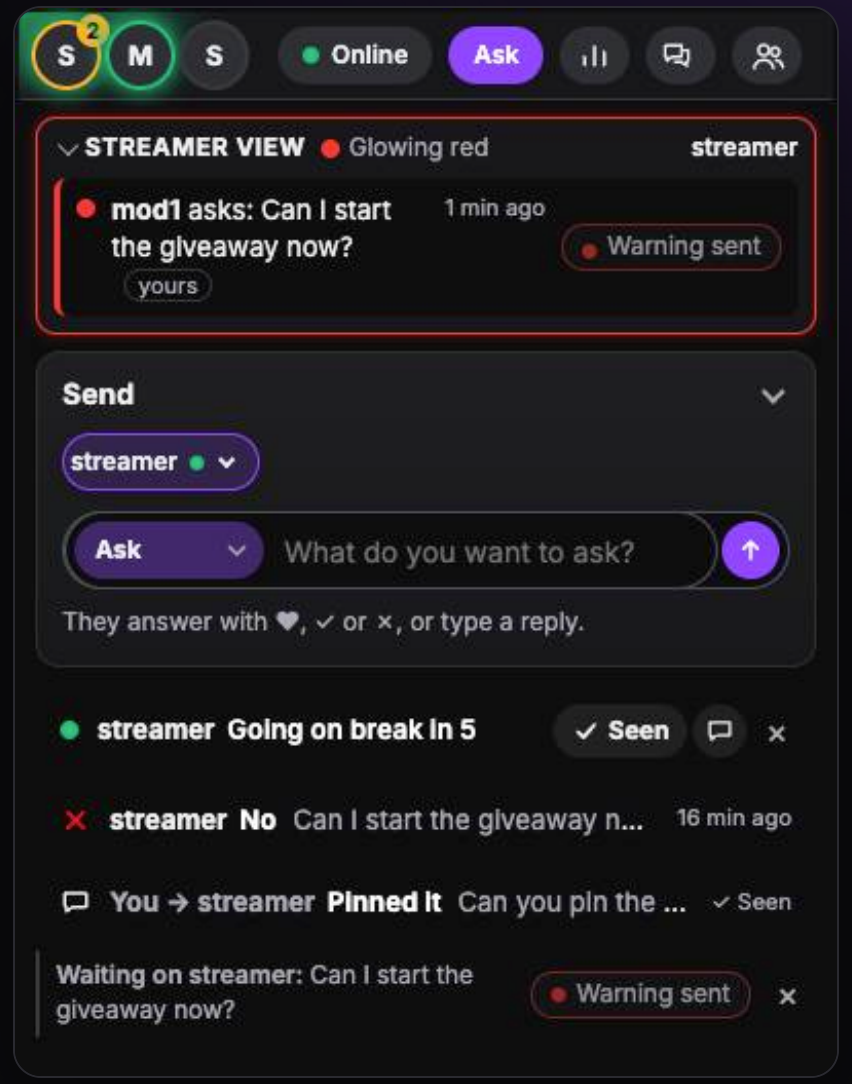

Warning
Red, louder double beep

Nothing climbs on its own. The words always stay readable; only the colour behind them fades.

FOR MODS · NUDGE AND WARNING

Nudge when it's waiting. Warn when it can't wait.

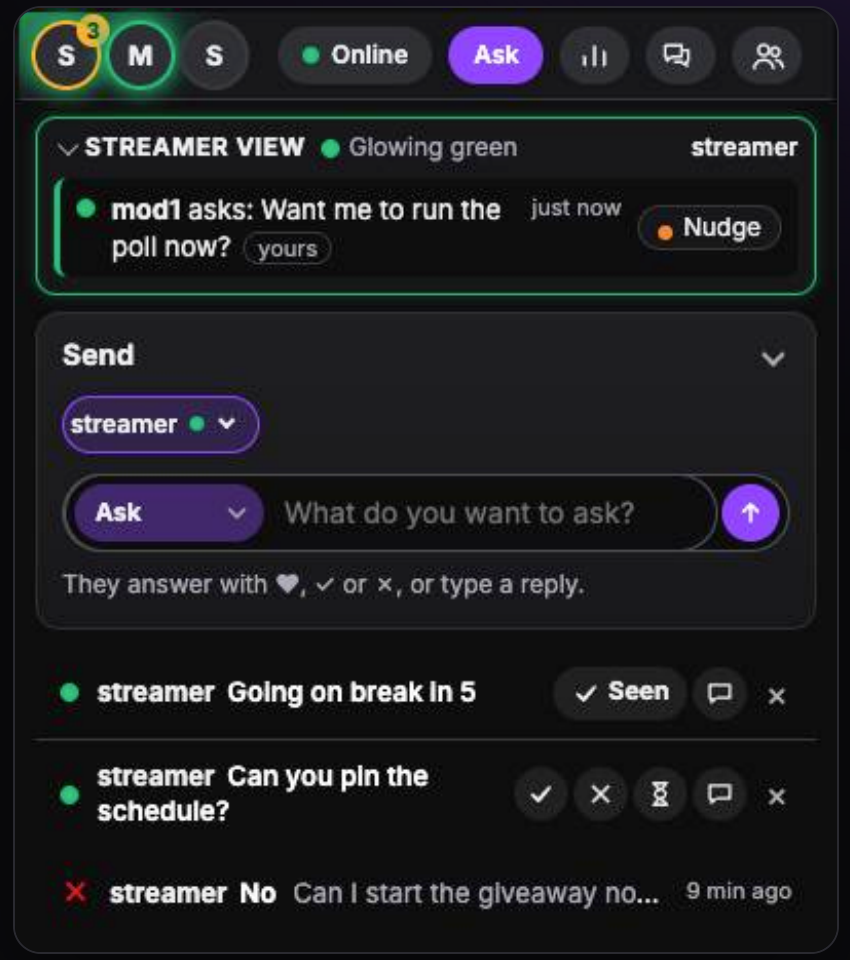

- **Nudge** moves an unanswered question up a colour on the streamer's screen: orange, yellow, white. Up to three, 15 seconds apart.
- **Send a warning** by tapping Nudge six times quickly. The button counts down, then says "Warning sent", and the question turns red with a louder beep.
- **It's protective.** A warning is a mod looking out for the streamer: trouble in chat, a safety issue. At most one every 30 seconds.

FOR MODS · TWITCH SPACE SIDE PANEL

See what the streamer sees

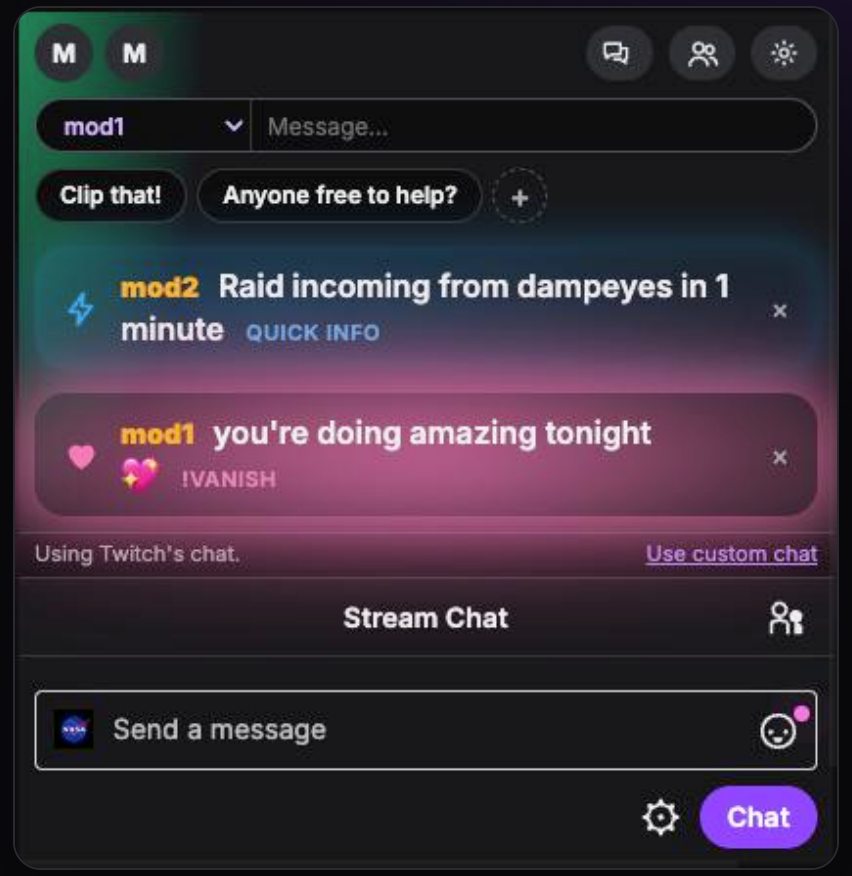

- **Streamer View** mirrors the streamer's dock: its glow, everything waiting (from anyone), unseen answers, and notes. It follows the channel being watched.
- **One typing bar:** pick Ask, Quick info or !vanish at its left. It starts with the streamer of the stream that's open.
- **Slim lists, newest first.** One line each, small ♥ ✓ × or Seen buttons, a reply box only when wanted. Hover turns a line into a glowing pill.
- **Status menu** (Online, Idle, Offline) and **flagging chat lines** from Twitch's chat.

FOR THE STREAMER · NOTES

Notes get the same space as questions

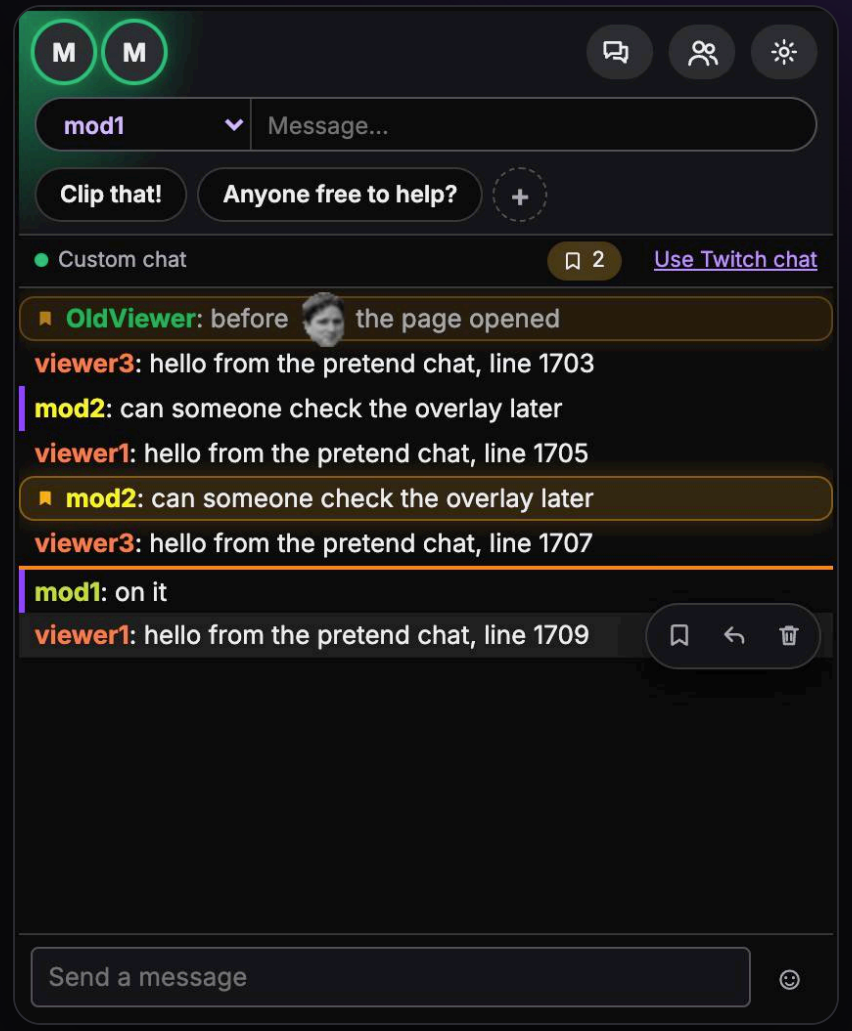

- **Quick info** (blue, 2 minutes) for things like an incoming raid or a technical hiccup.
- **!vanish notes** (pink, 30 seconds) bloom into a soft pink haze that spills into the background, then fade.
- **Full width,** the sender first, the same larger text as a question. No more little pills.

FOR THE STREAMER · CUSTOM CHAT (OPTIONAL)

Chat tools that stay out of the way

- **Icon tools on hover:** bookmark, reply, and delete (a real delete on Twitch, only where allowed).
- **Bookmarks for later,** with an amber marker and a counter in the chat bar that jumps back to them.
- **"Where I was":** one click draws an orange line across the chat under a message.
- **Flagged lines glow** in the flagging mod's colour; their pin stays at the top for 10 seconds.

FOR THE STREAMER · AT A GLANCE

Who's around, and how it sounds

Who's in chat

Each mod's picture in the bar shows how recently they chatted.

Chatted in the last 5 minutes: green

Then orange, yellow and white as time passes

In chat but quiet: lit, no ring

Not in chat: gray

Settings gear

- Sound on or off; volume quiet, normal or loud
- Softer reminder beeps on or off
- Edge glow, the quick-questions row, chat text size
- Custom or Twitch chat
- Share Streamer View with mods, or not

GET STARTED

Two minutes on each side

Mods: Twitch Space 2.5.0

1. Download **TwitchSpace-2.5.0.zip** from the latest release and unzip it.
2. Updating? Replace the files in the existing Twitch Space folder and click reload on its card. New? `chrome://extensions`, Developer mode, Load unpacked.
3. Allow the side panel if Chrome asks. Click the **handshake button** on Twitch, sign in, and add the streamer.

Streamer: the OBS dock

1. OBS: **Docks → Custom Browser Docks…**
2. Name it `Streamer Buddy System`, URL `https://handsome-tom.github.io/streamer-buddy-system/?livechat`
3. Sign in with Twitch, open Connections (two-people icon), and **Add back** the mods. It updates itself from then on.

COMING NEXT

Ideas to decide on

- **A live test** with a real streamer in OBS and a mod in Chrome, to tune the timing and sounds on an actual stream.
- **Who sees Streamer View.** Today every mutual connection sees everything waiting, including other people's questions. It could be limited to the streamer's Mods tag.
- **The streamer's quick-questions row** ("Clip that!"). It can be hidden in Settings; it could go, like the mods' did.
- **Keeping chat bookmarks** after the dock reloads (today they last until a reload).
